03 Meta Data

Lecture Media Retrieval

Maximilian Eibl, Medieninformatik, TU Chemnitz

Meta Data

Def.: Structured data about digital objects describing data, context, content, structure and life cycle.

Meta Data

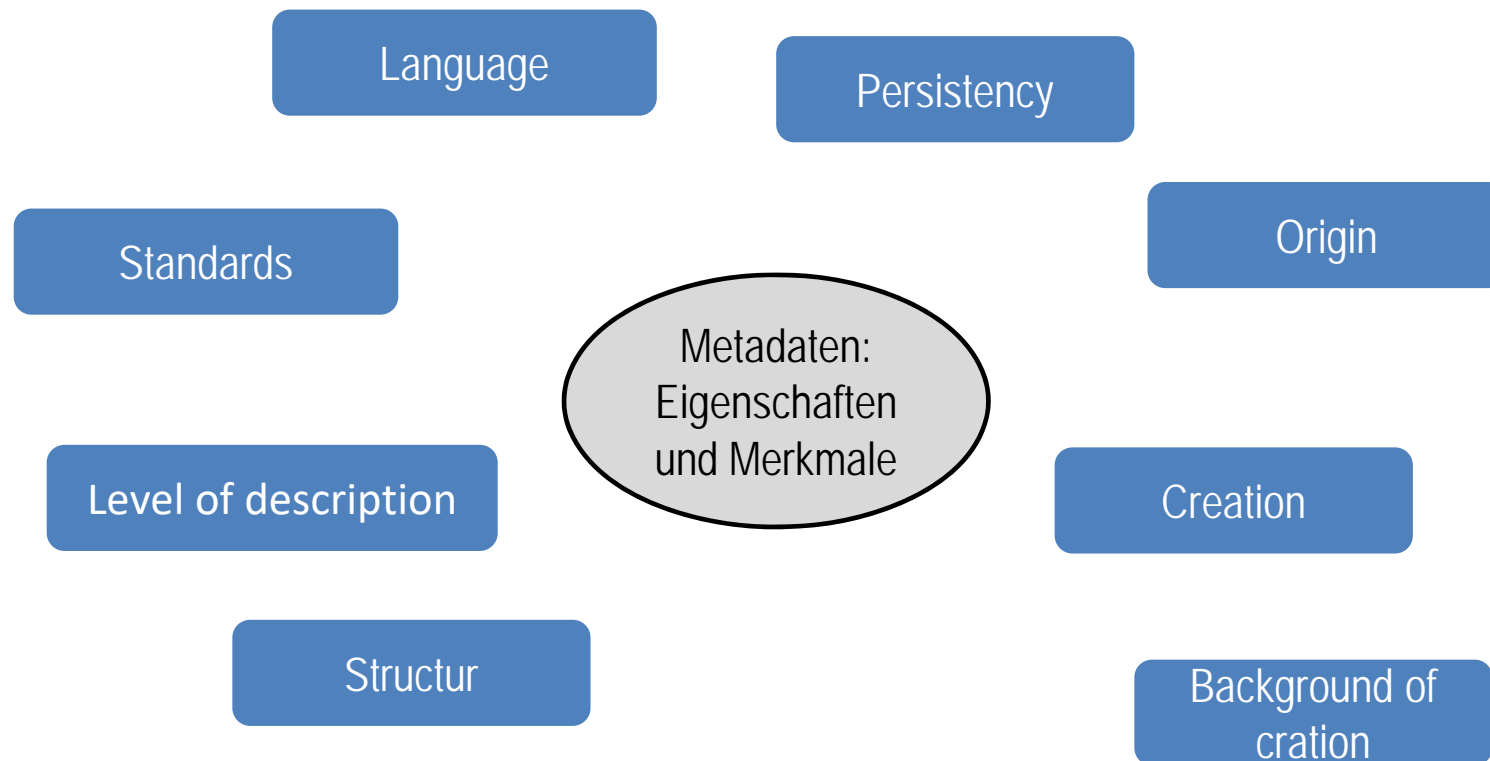

- Classic tools: Thesaurus, Classification
 - SWD
 - Dublin-Core
 - ...
- New tools:
 - Ontology
 - Folksonomy
 - Heterogeneity

Kinds of Meta Data

- Describing MD
 - Content MD
 - Filmographic MD
- Administrative MD
- Structural MD
- Archival MD
- Legal MD
- Technical MD
- Identificational MD
- Process oriented MD

Metadaten: Eigenschaften

MPEG-7: Motivation & Definition (Day 2001: Introduction)

"How many times have you seen science fiction movies such as 2001: A Space Odyssey and thought, "Wow, we're so far away from having any of the fancy gadgets depicted in these movies!" In 2001, Hal, the talking computer intelligently navigates and retrieves information or runs complex operations instigated by spoken input. Or how about using an image-based query, say an image of the motorbike used by Arnold Schwarzenegger in the movie T2, to find images of similarly looking motorbikes. Dreams or reality? [...] As more and more audiovisual information becomes available from many sources around the world, many people would like to use this information for various purpose"

"MPEG-7 is a multimedia content description standard, [...], that addresses how humans expect to interact with computer systems, since it develops rich descriptions that reflect those expectations."

"MPEG-1, -2, and -4 make content available. MPEG-7 lets you to find the content you need."

MPEG-7 - Motivation

- Increasing relevance of non-textual media
- Classical annotation systems are primarily text oriented
- Increasing need for support in descriptions for multi media
- Different to MPEG-1, -2, -4: MPEG-7 does not code content but descriptions
- Aim: make media usable in different applications

Status of MPEG-7

- Development 1996 – 2001
- Great bandwidth of abstraction levels and descriptions
 - „low-level“
 - „high level“
 - Flexible use
- Description schemes for different media
- Extendable schemes
- Support

Parts of MPEG-7

- MPEG-7 Systems
- MPEG-7 Description Definition Language
- MPEG-7 Visual
- MPEG-7 Audio
- MPEG-7 Multimedia Description Schemes MDS
- MPEG-7 Reference Software
- MPEG-7 Conformance
- MPEG-7 Extraction and Use of Descriptions

Typical Areas von MPEG-7-Descriptions

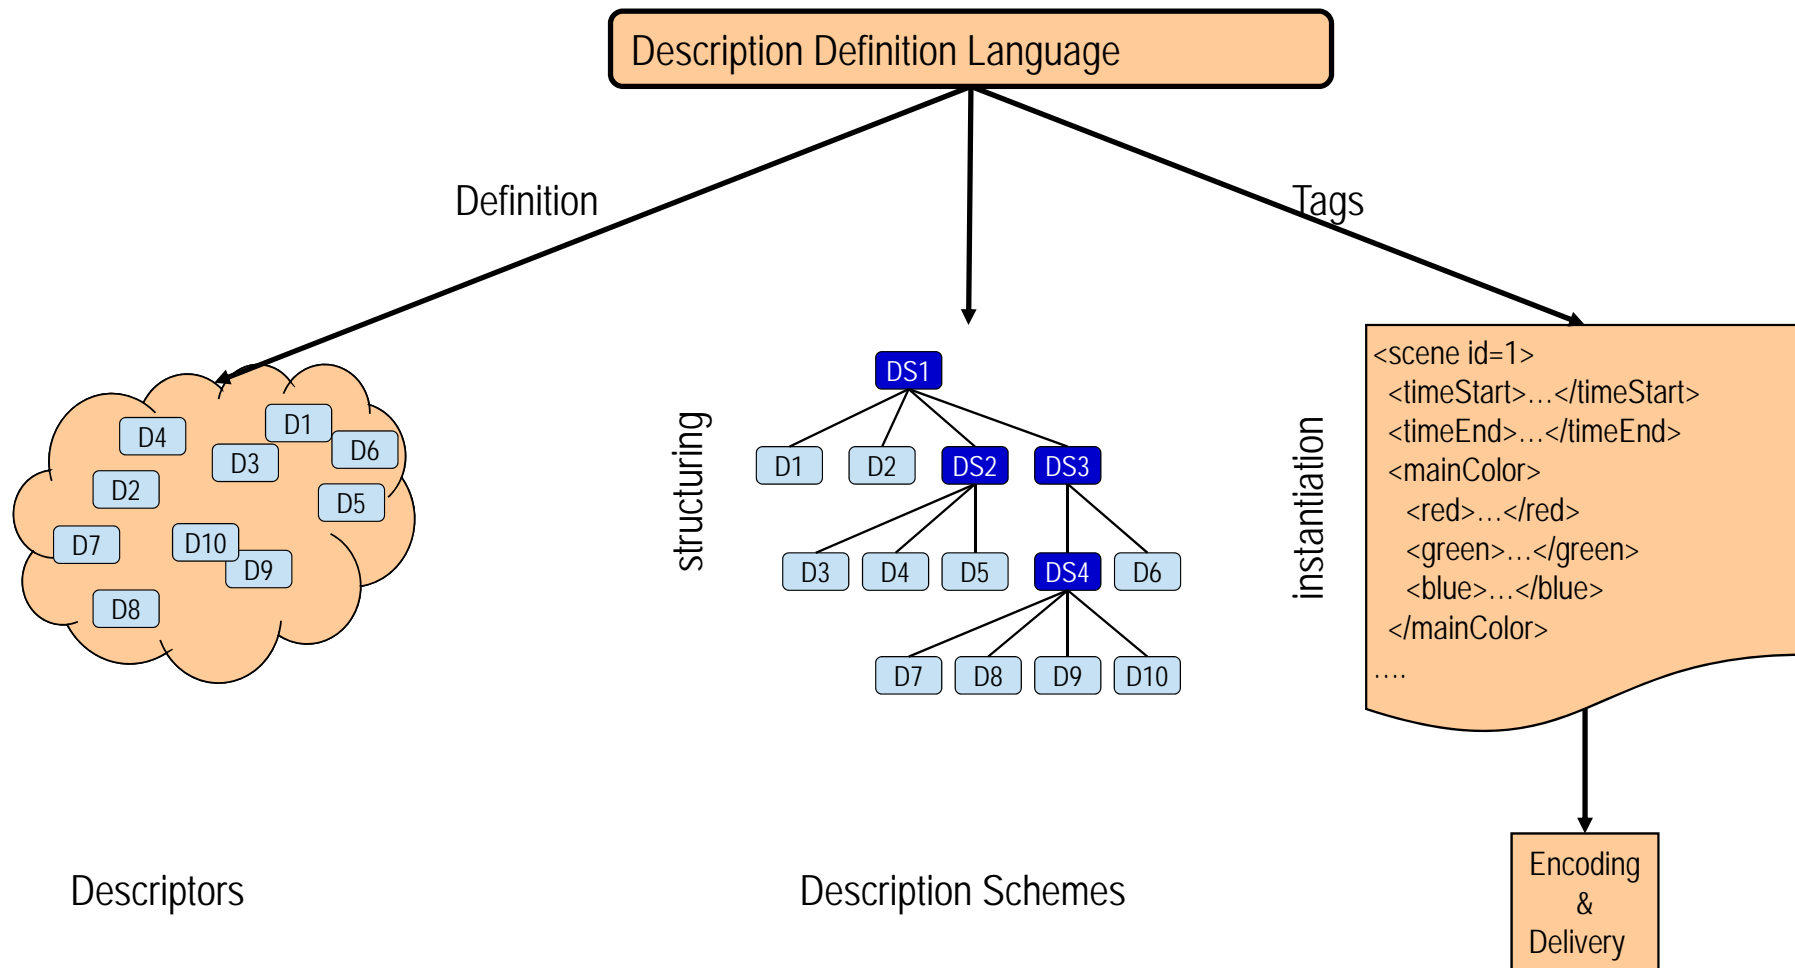

- Classial Meta Data
- Perceptional features
- Content usage and cross references

Basic Components of MPEG-7

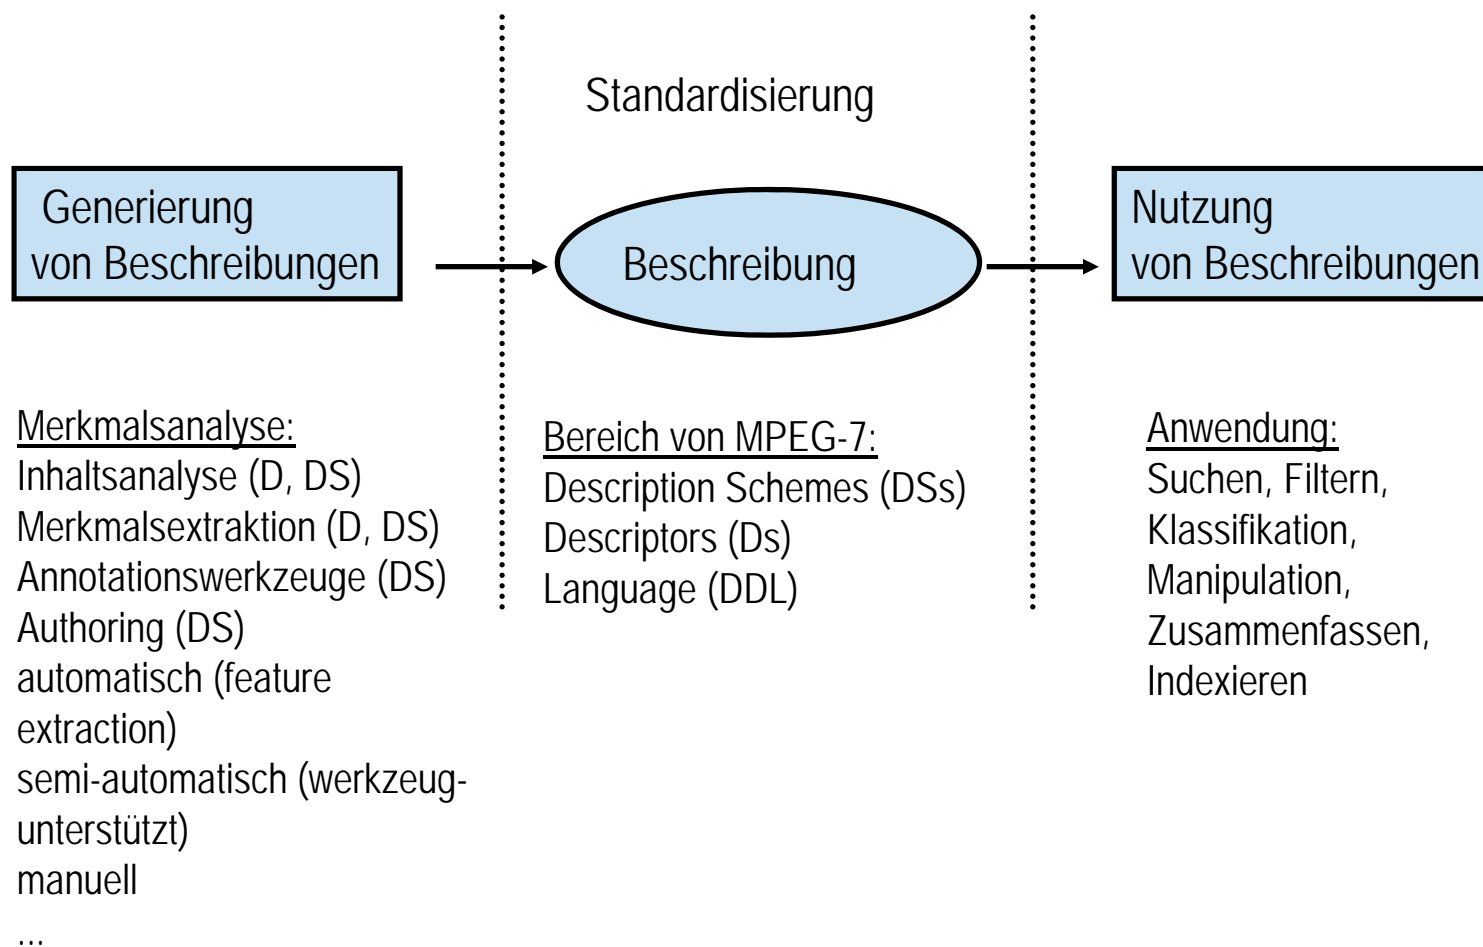

- Description tools → descriptors (*Beschreibungswerkzeuge*)
- Description schemes (*Beschreibungsschemata*)
- Description definition language (*Beschreibungssprache*)
- System tools

Bestandteile einer MPEG-7-Beschreibung II: Zusammenspiel

Anwendungskette von MPEG-7

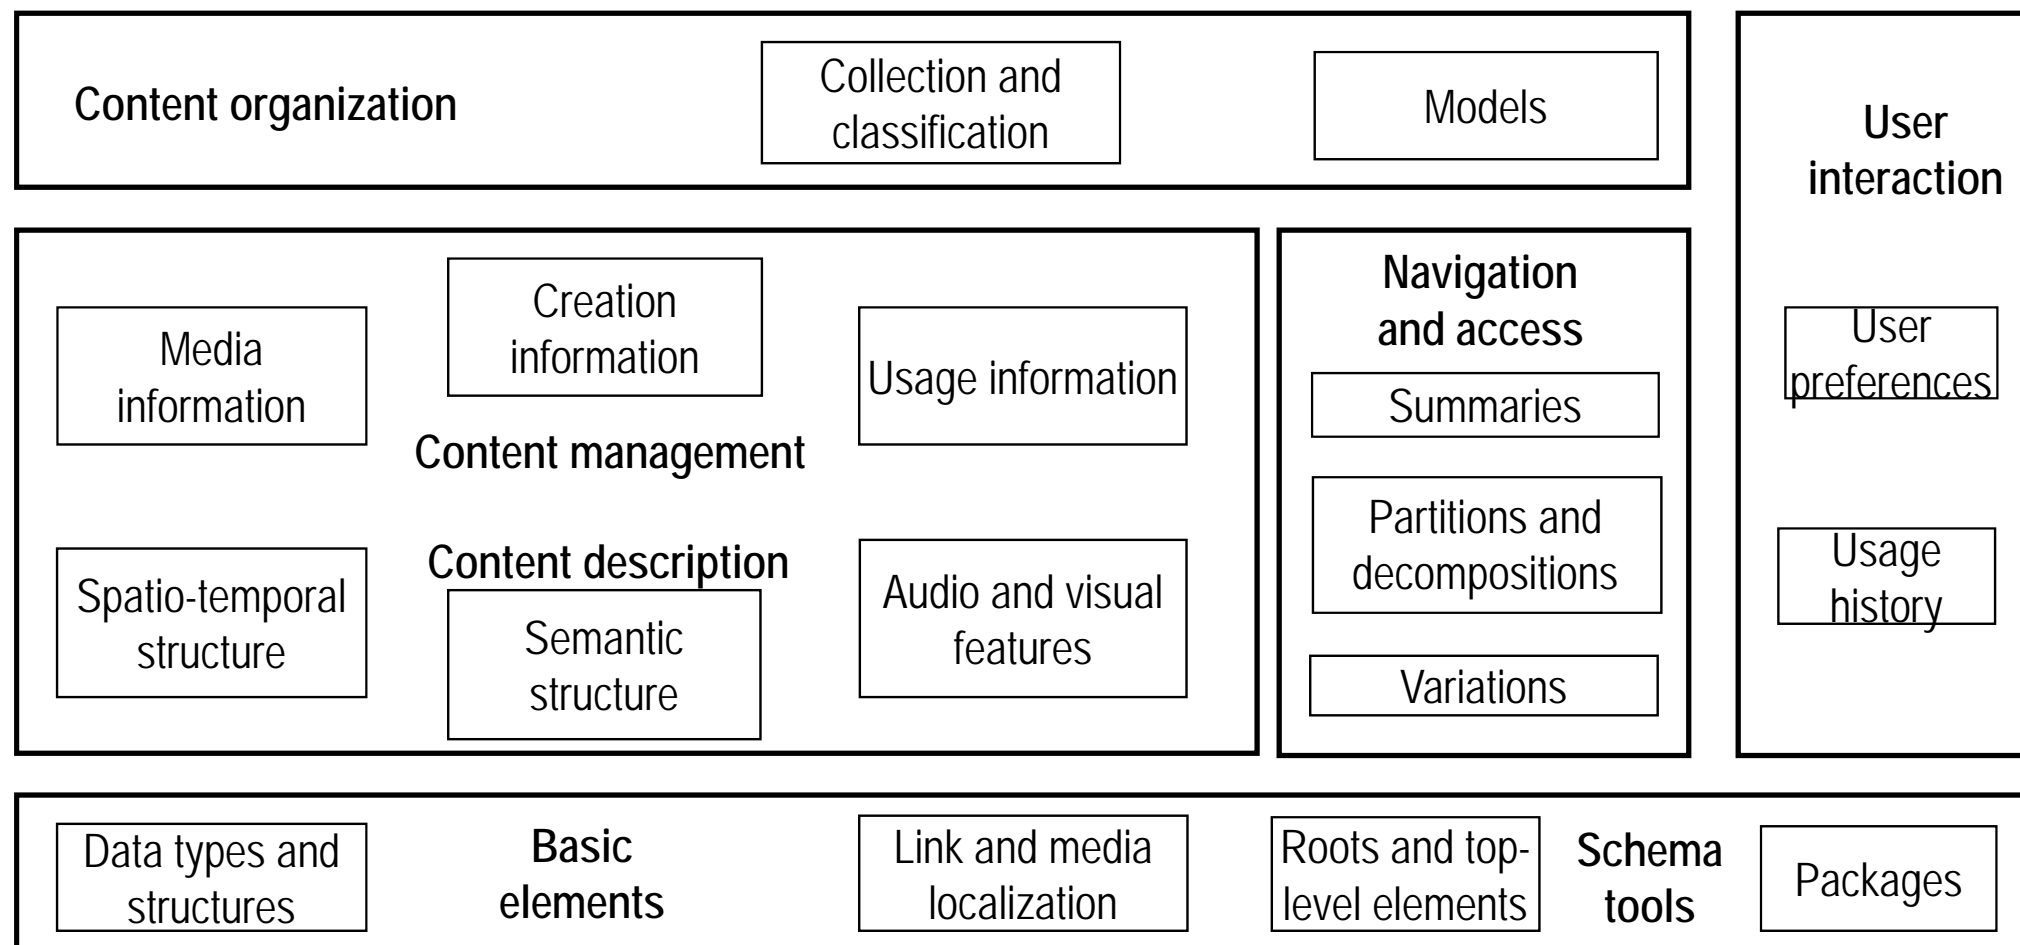

Die MPEG-7 DDL - description definition language

- Syntax basiert auf XML und XML Schema
- Teile:
 - XML Schema structural language components (d. h. Teil des W3C XML Schema-Standards)
 - XML Schema datatype language components (d. h. Teil des W3C XML Schema-Standards)
 - Erweiterungen von XML Schema, die MPEG-7-spezifisch sind, z. B. Einführung zusätzlicher Datentypen für die Beschreibung multimedialer Daten (Vektoren, Matrizen, getypte Referenzen)
- Ergebnis: MPEG-7-Beschreibungen sind als XML repräsentierbar und (damit) interoperabel (ungeachtet der Möglichkeit der Binärcodierung)

Segment DS, Examples for Segments

Temporal segment (Video Segment, Audio Segment)	Spatial segment (Still Region)
<p data-bbox="168 558 739 638">  Time </p> <p data-bbox="224 670 582 718">  </p> <p data-bbox="470 798 761 909">Segment composed of one connected component</p> <p data-bbox="134 893 179 941">a)</p>	<p data-bbox="873 542 1187 782">  </p> <p data-bbox="1164 798 1456 909">Segment composed of one connected component</p> <p data-bbox="806 893 851 941">b)</p>
<p data-bbox="168 1005 739 1085">  Time </p> <p data-bbox="201 1133 627 1181">  </p> <p data-bbox="470 1260 761 1372">Segment composed of three connected components</p> <p data-bbox="134 1340 179 1388">c)</p>	<p data-bbox="873 989 1187 1228">  </p> <p data-bbox="1120 1260 1411 1372">Segment composed of three connected components</p> <p data-bbox="806 1340 851 1388">d)</p>

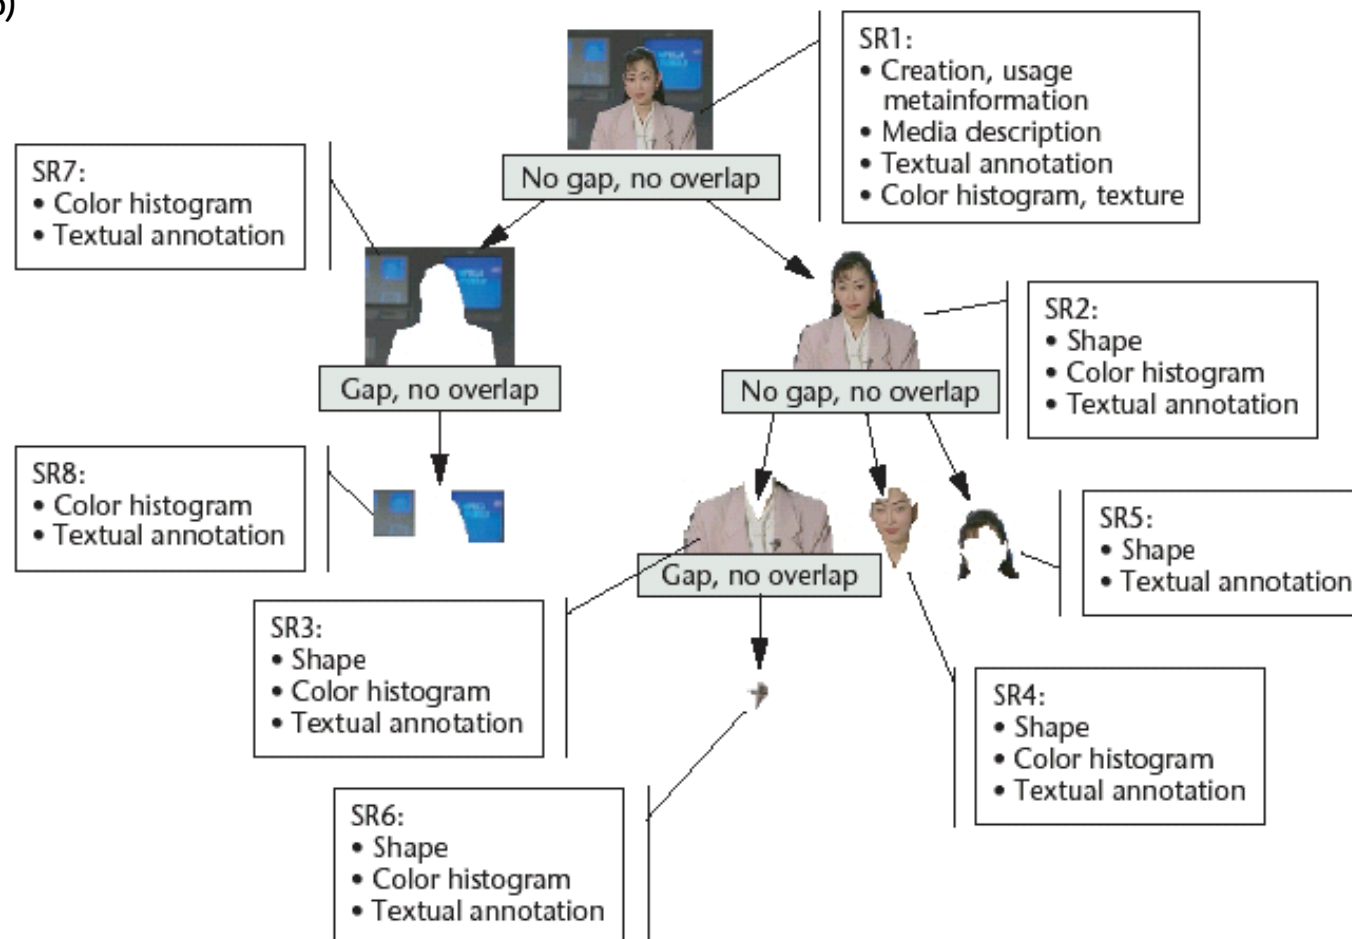

Special Properties of Segment Description

Property	Video Segment	Still Region	Moving Region	Audio-segment
Time	X		X	X
Shape		X	X	
Color	X	X	X	
Texture		X		
Movement	X		X	
Camera Movement	X			
Audio			X	X

Example of a MPEG-7-Description of Still Regions)

(Martínez 2002B: 91, Fig. 6)

Beschreibung typischer Anwendungsszenarien im Rahmen des Standards

- Applikationstypen als Teil des sog. MPEG-7 eXperimental Model, das während der Entwicklung des Standards als gemeinsame Entwicklungsbasis diente
- Anwendungsklassen (Haupteinteilung: feature extraction / client applications (s. o.))
 - extraction application: Zu gegebenen Multimediadaten werden Beschreibungselemente nach MPEG-7 generiert
 - search & retrieval: Mit Hilfe einer Beschreibungsdatenbank können zu einer Anfrage geeignete Media-assets selektiert werden
 - media transcoding: Mit Hilfe vorliegender Beschreibungen und ggf. Anfragen werden Medien umkodiert
 - description filtering: Filtern und selektieren von Beschreibungen durch Anfragen
- Weitere Einteilungsmöglichkeiten
 - nach Inhaltsart
 - nach push- oder pull-Anwendungen

MPEG-7: Beispiele für Anwendungen nach „Branchen“

- Digitale Bibliotheken, Medienarchive
- Media Authoring (inkl. Personalisierung)
- Kulturdienste (Museen etc.)
- Multimedia-Verzeichnisdienste
- Streaming Media („Rundfunk“)
- E-Commerce (personalisierte Anwendungen)
- Überwachung (Verkehr, Logistik)
- Biometrik
- Entertainment
- Soziale Dienste
-
